

Types of Transformers.

Depending upon the manner in which primary and secondary are wound on the transformer, core.

Transformers are of two types

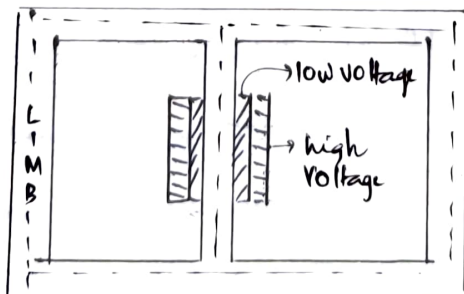

- (1) Core type
- (2) Shell type

I Core type

- winding encircles the core
- single magnetic circuits
- Core has two limbs

(a) shell type

- Core encircles most part of winding
- double magnetic circuits
- Core has three limbs
- Both the windings are placed on central limb
