

INTRODUCTION TO COMPUTER BASED PROBLEM SOLVING

Introduction

- C is a general purpose language.
- C is very closely associated with UNIX.
- Developed in Bell Laboratories.
- Most of the programs of UNIX are written and run with the help of 'C'.
- Many of the important ideas of 'C' are from BCPL by Martin Richards.
- In 1972, Dennis Ritchie at Bell Laboratories developed C Language.

Why Name 'C' was given to this language?

- Many of the ideas of C language were derived and taken from 'B' language.
- BCPL and CPL are previous versions of 'B' language.
- As many features came from B it was named as 'C'.

Computer Based Problem Solving

- Follows step by step procedure to develop a software - procedure oriented approach
- 2 major phases in software development
 - ✓ Problem Definition Phase- Gather required information
 - ✓ Problem Solving Phase

Computer Based Problem Solving

Problem Identification and Definition

- Determine information needs
- Take existing system as reference
- Keep a question & answer session
- State expected information required to define a problem
- Remove the gap in understanding of information needs

Computer Based Problem Solving

Problem while Identifying Information needs

1. Speed of processing
2. Volume of work
3. Reliability
4. Accuracy
5. Security
6. Cost

THANK YOU
