A

B.Tech. Degree I Semester/II Semester Supplementary Examination
November 2019

CE/EE GE 15-1203 A ENGINEERING GRAPHICS
(2015 Scheme)

Time: 3 Hours

Maximum Marks: 60

(5 × 12 = 60)

- I. Construct a Backward Reading Vernier scale with R.F= 1/25, long enough to measure 4 m having a least count of 1 cm. Show 1.8 m, 3.12 m on it.

OR

- II. A point 'C' whose x and y coordinates, 50 mm and 60 mm lies on a rectangular hyperbola. Draw the curve and draw a tangent and normal at any point.

- III. The plan of a 75 mm long line PQ measures 50 mm. The midpoint of the line is 60 mm in front of VP and 45 mm above HP. The point Q is 40 mm in front of VP. Draw its projections and find its inclinations with HP and VP.

OR

- IV. A square lamina of diagonals 70 mm, rests on HP on one of its corners, such that it appears to be a rhombus of minor diagonal 40 mm in top view. Draw its projections if major diagonal is inclined at 48° with XY in top view.

- V. Draw the projections of a pentagonal prism resting on HP on one of its corners with axis making 40° to HP and plan of axis making 50° to XY.

OR

- VI. A square prism of 50 mm base and 100 mm height rests on its base with its faces equally inclined to VP. Solid is cut by a section plane, such that the True Shape with maximum base and 60 mm altitude is formed. Draw Sectional Elevation, Sectional Plan and True Shape.

- VII. A cylinder 50 mm diameter, 60 mm height stand on HP. A section plane perpendicular to VP and inclined at 60° to HP bisects the axis. Draw the development of truncated cylinder.

OR

- VIII. A cylinder of height 80 mm and 50 mm diameter resting on its base is penetrated by another cylinder 50 mm such that axes intersect each other at right angles at 40 mm above base. Draw the curve of intersection.

- IX. A hemisphere 60 mm diameter rests on a circular slab 60 mm diameter, 20 mm thick on its flat face, such that their rings coincide. Draw the Isometric Projection of the combination of solids.

OR

- X. A square prism side of base 30 mm and height 60 mm rests on its rectangular face on ground such that one rectangular face and square face are equally inclined to PP and the vertical edge is on PP. The SP is 45 mm in front of PP, 90 mm above GP and lies in the central plane which passes through the midpoint of axis of prism. Draw the Perspective View.
