

P: Introduction

TO FIND THE SUM OF DIGITS OF A NUMBER

AIM

To write a program to find the sum of digits of a number.

ALGORITHM

Steps

1. Start
2. Initialize a variable sum = 0
3. Input a number n
4. While n > 0, do the following:
 - 5.1 Extract the last digit: $digit = n \% 10$
 - 5.2 Add it to sum: $sum = sum + digit$
 - 5.3 Remove the last digit: $n = n / 10$
6. Print sum
7. Stop

RESULT

Enter the number: 3

OUTPUT

Finding Factorial of a number
Enter the number 3
6

Experiment: 10

TO FIND FACTORIAL OF A GIVEN NUMBER

AIM

To write a program to find the factorial of a number

ALGORITHM

1. Start
2. Initialize $b = 1$
3. Input and read number a
4. Start a while loop with the input number as condition
5. Run the following steps:
 - 5.1 $b = a * b$
 - 5.2 $a --$
6. If $a \neq 0$, go to step 5, else go to step 7
7. Print factorial
8. Stop

RESULT

A C program to find the factorial of a number was compiled.
