

Experiment 6

ELECTRICITY BILL CALCULATION

AIM

To write a program to generate the bill for the electricity charges of a customer, as per the following criteria

S.No	USAGE	UNIT CHARGE
1.	Upto 100 units	₹ 3.50/-
2.	101 to 200 units	₹ 4/-
3.	201 to 500 units	₹ 5/-
4.	More than 500 units	₹ 8/-

In addition to the energy charges, a fixed charge of ₹ 40/- and a tax at the rate of 12% are to be paid by the customer. The customer number and the usage is to be fed as the input. The output should be neatly presented with appropriate headings and captions.

OUTPUT

Enter Customer Number : 1220

Enter Units Consumed : 1000

ELECTRICITY BILL

Consumer ID : 1200

Units Consumed : 1000

Fixed charge : 40

Energy charge : 6250.00

Tax : 750.00

Total amount : 7040.00

CHARGE	UNIT	AMOUNT
Fixed Charge	1000	40
Energy Charge	1000	6250.00
Tax	1000	750.00
Total	1000	7040.00

ALGORITHM

- 1) Start
- 2) Read customer No, units, amount, surcharge, total amount
- 3) If (unit < 100)
 - amount = unit * 3.5
- else if (101 < unit < 200)
 - amount = 350 + (unit - 100) * 4
- else if (201 < unit < 500)
 - amount = 750 + (unit - 200) * 5
- else
 - amount = 2250 + (unit - 500) * 8
- 4) surcharge = amount * 0.12
- 5) Total amount = amount + surcharge + 40/-
- 6) Print total bill amount with necessary information
- 7) Stop

RESULT

A C program to calculate and display electricity bill amount was compiled.
