

Experiment : 9

TO FIND THE SUM OF DIGITS OF A NUMBER

AIM

To create a program to find sum of digits of a number

ALGORITHM

1. Start
2. Initialize a variable sum = 0
3. Start a while loop with the condition that sum > 0
4. Add to sum the value at one place in num as $sum = sum + num \% 10$
5. Divide num by 10 as the current digit at one's place has been counted
6. If $num / 10 \neq 0$ go to step 4, else go to step 7
7. Display sum
8. Stop

RESULT

A C program to find the sum of digits of a number was created.

OUTPUT

Enter the number 687567
Sum of digits = 39
