**B.Tech. Degree II Semester Regular and Supplementary/
I Semester Supplementary Examination May 2017**

CS/EC/IT GE 15-1204 B & CE/EE/ME/SE GE 15-1104 A

BASIC CIVIL ENGINEERING

(2015 Scheme)

Hours

Maximum Marks : 60

PART A

(Answer *ALL* questions)

(10 × 2 = 20)

- I. (a) Which are the different types of cement?
- (b) What are the factors affecting the workability of concrete?
- (c) Which are the precautions to be taken while placing the concrete?
- (d) How are the piles classified?
- (e) Compare English bond and Flemish bond.
- (f) What is the basic principle of surveying?
- (g) Which are the points to be kept in mind while selecting the survey stations?
- (h) Which are the temporary adjustments of a leveling instrument?
- (i) Define coverage and floor area ratio.
- (j) What are the benefits of green buildings?

PART B

(4 × 10 = 40)

- II. Which are the tests conducted on bricks to find their suitability as a building material?

OR

- III. Explain the methods of compacting and curing of concrete.

- IV. How is the stone masonry classified? Explain.

OR

- V. Explain with the help of a sketch the components of a well foundation and also write the common types of well shapes.

- VI. Write short notes on:

- (i) Reduced level of a point.
- (ii) Back sight and fore sight.
- (iii) Differential levelling.

OR

- VII. The following readings were successively taken with an instrument in leveling work:

0.32, 0.53, 0.62, 1.78, 1.91, 2.35, 1.75, 0.35, 0.69, 1.24 and 0.98 m.

The position of the instrument was changed after 3rd, 7th and 9th readings. The first reading was taken on a B.M of R.L 100.00. Calculate the reduced levels of all the points by height of collimation method. Apply the usual check.

- VIII. List down any ten factors which you will consider for the selection of a site for a residential building.

OR

- IX. Explain in detail the classification of urban roads.
