B.Tech. Degree VIII Semester Examination April 2016

CS 1804 E2 DATA MINING (2012 Scheme)

Time : 3 Hours

Maximum Marks : 100

PART A (Answer *ALL* questions)

(8 × 5 = 40)

- I. (a) Define the term data mining.
- (b) What are the applications of data mining?
- (c) How can we predict accuracy of a classification method?
- (d) Define Association rule mining.
- (e) Explain Naïve Bayes classifier with example.
- (f) Define support vector machine.
- (g) What are the categories of web mining?
- (h) Explain the concept of temporal mining.

PART B

(4 × 15 = 60)

- II. Write notes on data warehousing and OLAP. (15)
- OR**
- III. (a) Write notes on different data mining stages. (10)
- (b) Differentiate unsupervised and supervised classification. (5)
- IV. Discuss an algorithm for building a decision tree along with the split algorithm based on Information Theory. (15)
- OR**
- V. (a) Write the algorithm for Kmeans clustering. (5)
- (b) Write notes on agglomerative method with an example. (10)
- VI. Briefly explain lazy classifiers and time series analysis. (15)
- OR**
- VII. Write short note on any two statistical techniques in data mining. (15)
- VIII. Discuss briefly on WEKA software package. (15)
- OR**
- IX. Write notes on advanced data mining techniques: (15)
 - (i) Text mining
 - (ii) Spatial mining
 - (iii) Temporal mining
