B.Tech. Degree VIII Semester Supplementary Examination
September 2016

CS 1804 (E2) DATA MINING
(2012 Scheme)

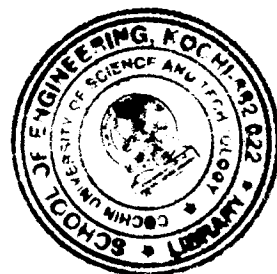

Time : 3 Hours

Maximum Marks : 100

PART A
(Answer *ALL* questions)

(8 × 5 = 40)

- I. (a) What is data mining? Describe the steps involved in data mining.
(b) Differentiate supervised and unsupervised learning.
(c) Describe decision tree model.
(d) Discuss the requirements of clustering in data mining.
(e) Explain linear regression.
(f) Explain rough set theory.
(g) Explain web usage mining.
(h) Write the algorithm for bagging and explain.

PART B

(4 × 15 = 60)

- II. Discuss the different data mining strategies.
OR
III. Explain multidimensional database using a 3-D data cube representation. Illustrate the different schemas for multidimensional data bases.
IV. Discuss genetic learning in detail.
OR
V. Discuss different density based methods in clustering.
VI. State Baye's theorem. Explain Naïve Bayes classifier.
OR
VII. Discuss lazy classifiers in detail.
VIII. Discuss text mining. Explain its approaches.
OR
IX. Discuss spatial mining in detail.
