B.Tech. Degree VII Semester Examination November 2016

CS 1702 ARTIFICIAL INTELLIGENCE (2012 Scheme)

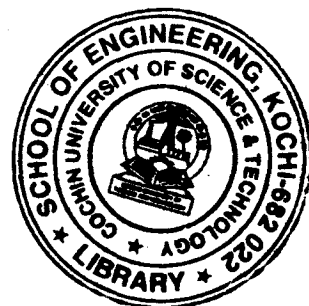

Time : 3 Hours

Maximum Marks : 100

PART A (Answer *ALL* questions)

(8 × 5 = 40)

- I. (a) What are software agents? Explain briefly.
- (b) What is agent topology?
- (c) Explain Hill climbing algorithm with an example.
- (d) What is meant by alpha-beta cut offs?
- (e) What are predicate variables and constants?
- (f) What are goal trees?
- (g) What are semantic Nets? Give an example.
- (h) Explain how scripts are used for knowledge representation.

PART B

(4 × 15 = 60)

- II. What is agent oriented programming? Briefly explain. (15)

OR

- III. Briefly explain the java implementation of intelligent agents. (15)

- IV. Explain the different heuristic search techniques. (15)

OR

- V. (a) Explain the Mini max-search algorithm with the help of an example. (8)

- (b) Explain what is meant by constraint satisfaction. (7)

- VI. Explain the terms. (15)

(i) First order logic.

(ii) Wff.

(iii) Forward chaining and backward chaining.

OR

- VII. Explain resolution by refutation. (15)

- VIII. Explain what you mean by. (15)

(i) frames.

(ii) conceptual dependency.

(iii) fuzzy logic.

OR

- IX. What are the different types of learning? Explain. (15)
