

**B.Tech. Degree VI Semester Special Supplementary Examination**  
**January 2019**

**ME 15-1603 OPERATIONS MANAGEMENT**  
**(2015 Scheme)**

Time : 3 Hours

Maximum Marks : 60

**PART A**  
**(Answer ALL questions)**

(10 × 2 = 20)

- I. (a) Define crashing of networks.  
 (b) What is a dummy activity? Sketch on a network diagram.  
 (c) Give an example for moving average method of forecasting.  
 (d) What do you mean by product life cycle?  
 (e) What is a bin card?  
 (f) Differentiate between specialization and inter-changeability.  
 (g) Define the term aggregate planning.  
 (h) What is the function of Gantt Chart?  
 (i) Define the term "Fixed position layout".  
 (j) What is the concept of depreciation?

**PART B**

(4 × 10 = 40)

- II. (a) What is the basic difference between PERT and CPM? (4)  
 (b) Briefly explain the importance of forecasting in operations management and how forecasting methods are classified. (6)

OR

- III. The following table gives the activities in a construction project with the relevant information. (10)

| Activity | Immediate Predecessor | Time (Months) |       | Direct cost (in lakhs) |       |
|----------|-----------------------|---------------|-------|------------------------|-------|
|          |                       | Normal        | Crash | Normal                 | Crash |
| A        | -                     | 4             | 3     | 60                     | 90    |
| B        | -                     | 6             | 4     | 150                    | 250   |
| C        | -                     | 2             | 1     | 38                     | 60    |
| D        | A                     | 5             | 3     | 150                    | 250   |
| E        | C                     | 2             | 2     | 100                    | 100   |
| F        | A                     | 7             | 5     | 115                    | 175   |
| G        | D, B, E               | 4             | 2     | 100                    | 240   |

Draw the network diagram, identify critical path, project duration before crashing and optimum project duration after crashing. Consider the indirect cost of the project per month as ₹60 lakhs.

- IV. (a) What are the various functions of production planning and control? Explain each function with specific examples. (6)  
 (b) Differentiate between product life cycle and product consumption cycle. (4)

OR

(P.T.O.)

- V. (a) Discuss the process stages involved in new product design. (5)  
 (b) What is EOQ? What are the costs involved in EOQ calculation? (5)

- VI. (a) What is the role and need of aggregate planning in manufacturing sectors? (5)  
 (b) What are the steps involved in critical ratio method of loading and scheduling? (5)

**OR**

- VII. (a) What are the objectives of sequencing and the assumptions made while solving sequencing problems? (5)  
 (b) A manufacturing company processes six different jobs on two machines A and B. Number of units of each job and its processing time on A and B are given in the following table. Find the optimum sequence, the total minimum elapsed time and idle time for each machine. (5)

| Job Number | No. of units of each job | Processing Time (Hours) |             |
|------------|--------------------------|-------------------------|-------------|
|            |                          | Machine – A             | Machine - B |
| 1          | 3                        | 5                       | 8           |
| 2          | 4                        | 16                      | 7           |
| 3          | 2                        | 6                       | 11          |
| 4          | 5                        | 3                       | 5           |
| 5          | 2                        | 9                       | 7           |
| 6          | 3                        | 6                       | 14          |

- VIII. (a) Discuss the factors that affect the selection of a plant layout with respect to different types of manufacturing operations. (5)  
 (b) Write notes on: (5)  
       (i) Systematic Layout Planning  
       (ii) Project Layout

**OR**

- IX. (a) How are material handling equipments classified? Give examples. (5)  
 (b) What are the various principles of material handling? (5)
